Problem Statement:

Road Accidents in India

Abstract for solution:

- Radiator on rear part of tractors and other heavy vehicles since they aren't visible during low lights
- Automobile companies developing smart watch which detects the oxygen levels which are synced with the vehicle
- And to beep when the oxygen level is low(in case of sleep or drowsiness)
- Having sensors on steering wheel or smart watch as mentioned in above point which detects our heartbeat..and slows down the car in case our heartbeat is above or below a certain range to avoid over speeding and can check drunk driving
- Have noise equipped sensors which reduce volume after a certain point so that the driver isn't isolated from outside world
- Increasing accessibility of metro since it carries mass number of people which reduces chances of road accidents
